

10-Point Commercial Security Audit Checklist

A Self-Assessment for South Jersey Business Owners

Provided by You Need L.E.D. - NJ DCA Licensed (34BF00056900)

Is your commercial property truly secure? Many business owners assume their security systems are adequate until an incident occurs. Use this quick 10-point checklist to evaluate your current setup. If you answer “No” or “Unsure” to more than two questions, your property may be at risk.

Part 1: Video Surveillance (CCTV)

1. Are your cameras capturing high-resolution (4K) footage with low-light/night vision capabilities?

- Older analog cameras often provide grainy footage that is useless for identifying faces or license plates, especially at night.
 - ☐ Yes
 - ☐ No
 - ☐ Unsure

2. Do you have AI-powered analytics (e.g., license plate recognition, person/vehicle detection) to reduce false alarms?

- Modern systems can differentiate between a stray animal and an actual intruder, saving you from unnecessary alerts.
 - ☐ Yes
 - ☐ No
 - ☐ Unsure

3. Is your video footage securely backed up to the cloud, protecting it from on-site tampering or equipment theft?

- If an intruder steals your NVR (Network Video Recorder), you lose all your evidence unless it's backed up off-site.
 - ☐ Yes
 - ☐ No
 - ☐ Unsure
-

Part 2: Access Control & Intrusion Detection

4. Can you instantly add or revoke access credentials (keycards, fobs, mobile app) for employees without changing physical locks?

- Traditional keys are easily lost or duplicated, creating a massive security vulnerability when an employee leaves.
 - ☐ Yes
 - ☐ No
 - ☐ Unsure

5. Does your access control system integrate with your video surveillance for visual verification of who is entering the building?

- Knowing *who* swiped a card is good; *seeing* that the person swiping the card is actually the authorized user is better.
 - ☐ Yes
 - ☐ No
 - ☐ Unsure

6. Is your intrusion detection system monitored ²⁴/₇ by a professional central station with video verification capabilities?

- Video verification allows dispatchers to confirm a crime in progress, leading to faster police response times.
- ☐ Yes
- ☐ No
- ☐ Unsure
-

Part 3: Fire Alarm & Life Safety

7. Is your fire alarm system fully compliant with current NFPA 72 codes and local South Jersey municipal regulations?

- Non-compliance can lead to hefty fines, insurance claim denials, and, most importantly, severe safety risks.
- ☐ Yes
- ☐ No
- ☐ Unsure

8. Has your fire alarm system been professionally inspected and tested within the last 12 months by a licensed technician?

- Regular inspections are not just a good idea; they are legally required to ensure the system will function during an emergency.
- ☐ Yes
- ☐ No
- ☐ Unsure
-

Part 4: Communication & Jobsite Security

9. Does your business phone system (VoIP) have failovers in place to ensure you never miss a call during a power or internet outage?

- Hosted PBX systems can automatically route calls to mobile devices if the primary office connection goes down.
- ☐ Yes
- ☐ No
- ☐ Unsure

10. If you manage construction sites or temporary locations, do you utilize solar-powered, wireless cameras for remote monitoring?

- Jobsite theft is a massive problem; self-contained, solar-powered units provide security where traditional power and internet are unavailable.

- ☐ Yes
 - ☐ No
 - ☐ Unsure
-

Your Results

- **0-1 “No/Unsure”:** Excellent. Your security posture is strong.
- **2-4 “No/Unsure”:** Warning. You have significant vulnerabilities that need addressing.
- **5+ “No/Unsure”:** Critical. Your business is at high risk. Immediate action is recommended.

Next Steps: Secure Your Business Today

Don't wait for an incident to expose your vulnerabilities. The You Need L.E.D. team offers comprehensive, on-site security evaluations for commercial properties in South Jersey and the Delaware Valley.
